

List Ranking

Pointer Jumping (Recursive doubling)

$O(\log n)$ time n processors

EREW PRAM

$O(n)$ cost algorithm

$O(\log n)$ time using $\frac{n}{\log n}$ processors

EREW PRAM

$O(n)$ optimal

Vertex reduction

Linked list of length n

in Array of size n

$n \rightarrow n/\log n$ no. vertices in the list

$O(\log n)$ time

$$O\left(\log \frac{n}{\log n}\right) = O(\log n) \text{ time } \frac{n}{\log n} \text{ processors}$$

$O(\log n)$
 several iterations
 Phase 1 { $O(1)$ time iterations
 independent set removed from the list
 list length $\leq n/\log n$

Phase 2 Pointer Jumping
 Phase 3 { several iterations

Vertex Reduction

Physical representation

1D-array of length n

Visualize the array as a 2-D array

- inactive
 - active
 - ruler
 - subject
 - removed
- } 5 labels for the vertices

iteration for the i^{th} node

if (the node is labelled ruler)
 splice out the next subject
 if (no more subjects are left)
 turns active

if (active and isolated)
splice it self out & advance } lucky.
 if (active and non isolated)
 participate in subject
 inter election

lucky all the time
 $n/\log n$

$\log n$

a	a	a	a	...	a	a
a	a	a	a		a	a
	i		i	...	i	i

✓ removed

isolated active node
 is one that is not adjacent to
 active nodes

lucky again:
we get an IS again

lucky all the time
 $n/\log n$

$\log n$

a	a	a	a	...	a	a
a	a	a	a		a	a
	i		i	...	i	i

✓ removed
✓ removed

isolated active node
is one that is not adjacent to
active nodes

Row 0 [a | a | .. - - - - | a] ✓

if (active and isolated) } lucky
splice it self out & advance
 (removed)

if (active and non isolated)
 participate in subject
 inter election

_____ & move forward if its node has
 been elected a subject

⁽²²⁾
2nd phase

$r(s) s s s r[s]$

if (ruler)

→

then remove the 1st subject

if no further subject left

turn active

if (active)

if isolated sphere out ↓

else SRE, ↓ if chosen subjects

$O(\log n)$ phases

before # vertices $\leq n/\log n$

subject-ruler election

1. colour the sublist
using $\log \log n$ colours
- Pick every local minimum
Break the list before the
local minima
